

Fire Safety Tips

In the event of a fire, the biggest enemy is time, every second counts! Escape plans help you get out of your home or business quickly. A small flame can become an out of control fire in less than 30 seconds. In minutes, a home or business can fill with thick black smoke and become fully engulfed in flames.

- Practice escape plans every month.
- Plan two ways out of each room.
- Immediately leave your home when a fire occurs.
- Never open doors that are hot to the touch.
- Designate a meeting location away from your home.
- **Once you're out, stay out!**

Having a working smoke alarm installed on every level of your home can dramatically increase your chances of survival. Smoke alarm batteries need to be tested monthly and should be changed with new ones at least twice yearly with time change. National Fire Alarm Code recommends that smoke alarms be replaced every ten years or as recommended by the manufacturer.

Having a monitored Smoke Detector from AAA Systems can provide 24 hour life and property safety by automatically dispatching Fire Fighters to your home - 24 hours a day, 365 days a year.
